1. *Synplocos urceolaris* Honda? Synplocaceae
- 2 *Loropetalum chinense* R.Br. Hamamelid.
- 3 *Juniperus formosana* Hayata Pinaceae
- 4 *Viola japonica* Langed. Hook Viol.
- 5 *Prunus*, mature leaves and fruits needed Rosaceae
- 6 *Berchemia lineata* DC. Rhamn.
- 7 *Drosera peltata* Sm. Droseraceae
- 8 *Carex tristachya* Thunb? Cyp. ok. no?!
- 9 *Ilizus* (Scroph.) fls. much longer than any I have seen; studied
- 10 *Vicia*, prob. *V. tetrasperma* Woench. Leg.
- 11 same as 10 or near it.
- 12 *Rubus rosacifolius* Sm. var. Ross.
- 13 *Scutellaria indica* Linn. Lab.
- 14 *Actinogelus sinicus* Linn. Beg.
- 15 no specimen
- 16 *Prunus*, same as 5 I think
- 17 no specimen
- 18 *Corydalis*, prob. *pallida* Pers. Papaver.
- 17 *Kalanchoe*, too fragmentary Grass.
- 20 *Viola patrinii* Ging. Viol.
- 21 *Briosa minor* Linn. Gram.
- 22 *Smilax china* Linn. var. Lil.
- 23-24 no specimens
- 25 *Foeniculum* UmbX.
- 26 *Torilis anthericus* Gaert. Umb.
- 27 *Dodonaea viscosa* Jacq. Sapind.
- 28 no specimen
- 29 *Helostema septemnerium* Lour. (*H. normale* Don.) Sol. st.
- ✓ 30 *Lysimachia clethroides* Duby. Prim.

Berkeley, April 11, 1925

2 #3

Dear Prof Metcalf:

- The following notes complete all that I can do in the further identification of your collections of 1924
- Nos. 1 and 228 are *Symplocos caudata* Wall., not *urceolaris*.
 - " 5 and 16 *Prunus japonica* var. *fokienensis* Rehder.
 - " 37 *Rosa gentiliana* Lev. & Van.
 - " 147 *Symplocos* near *anomala* Brand. but branches glabrous need flowering material.
 - 76 *Crataegus cuneata* var. or n.sp.? Very likely undescribed, more material needed, especially with flowers.
 - 273 is *Arundinella nepalensis* Trin.
 - 60 *Arundinella* sp., doesn't agree with any of the described species, perhaps a n.sp., but more ample material desired.
 - 248 *Sycopsis*? this is a guess only, as there are neither flowers nor fruits. I sent a part of it to Mr. Rehder and he states that it is different from all the hamamelidaceous material in the Arnold Arboretum. I wish that you would make a special effort to get this with flowers and fruits, and send me several specimens. Very likely undescribed.

Have greatly enjoyed working with your material and hope that you will find the time to make more extensive collections, and whenever possible supply notes

Very truly yours

E. Merrill

Handwritten notes and scribbles, possibly including "C.V." and "Merrill".

2724

The following all sterile, accurate determinations impossible in ~~all~~ some cases.

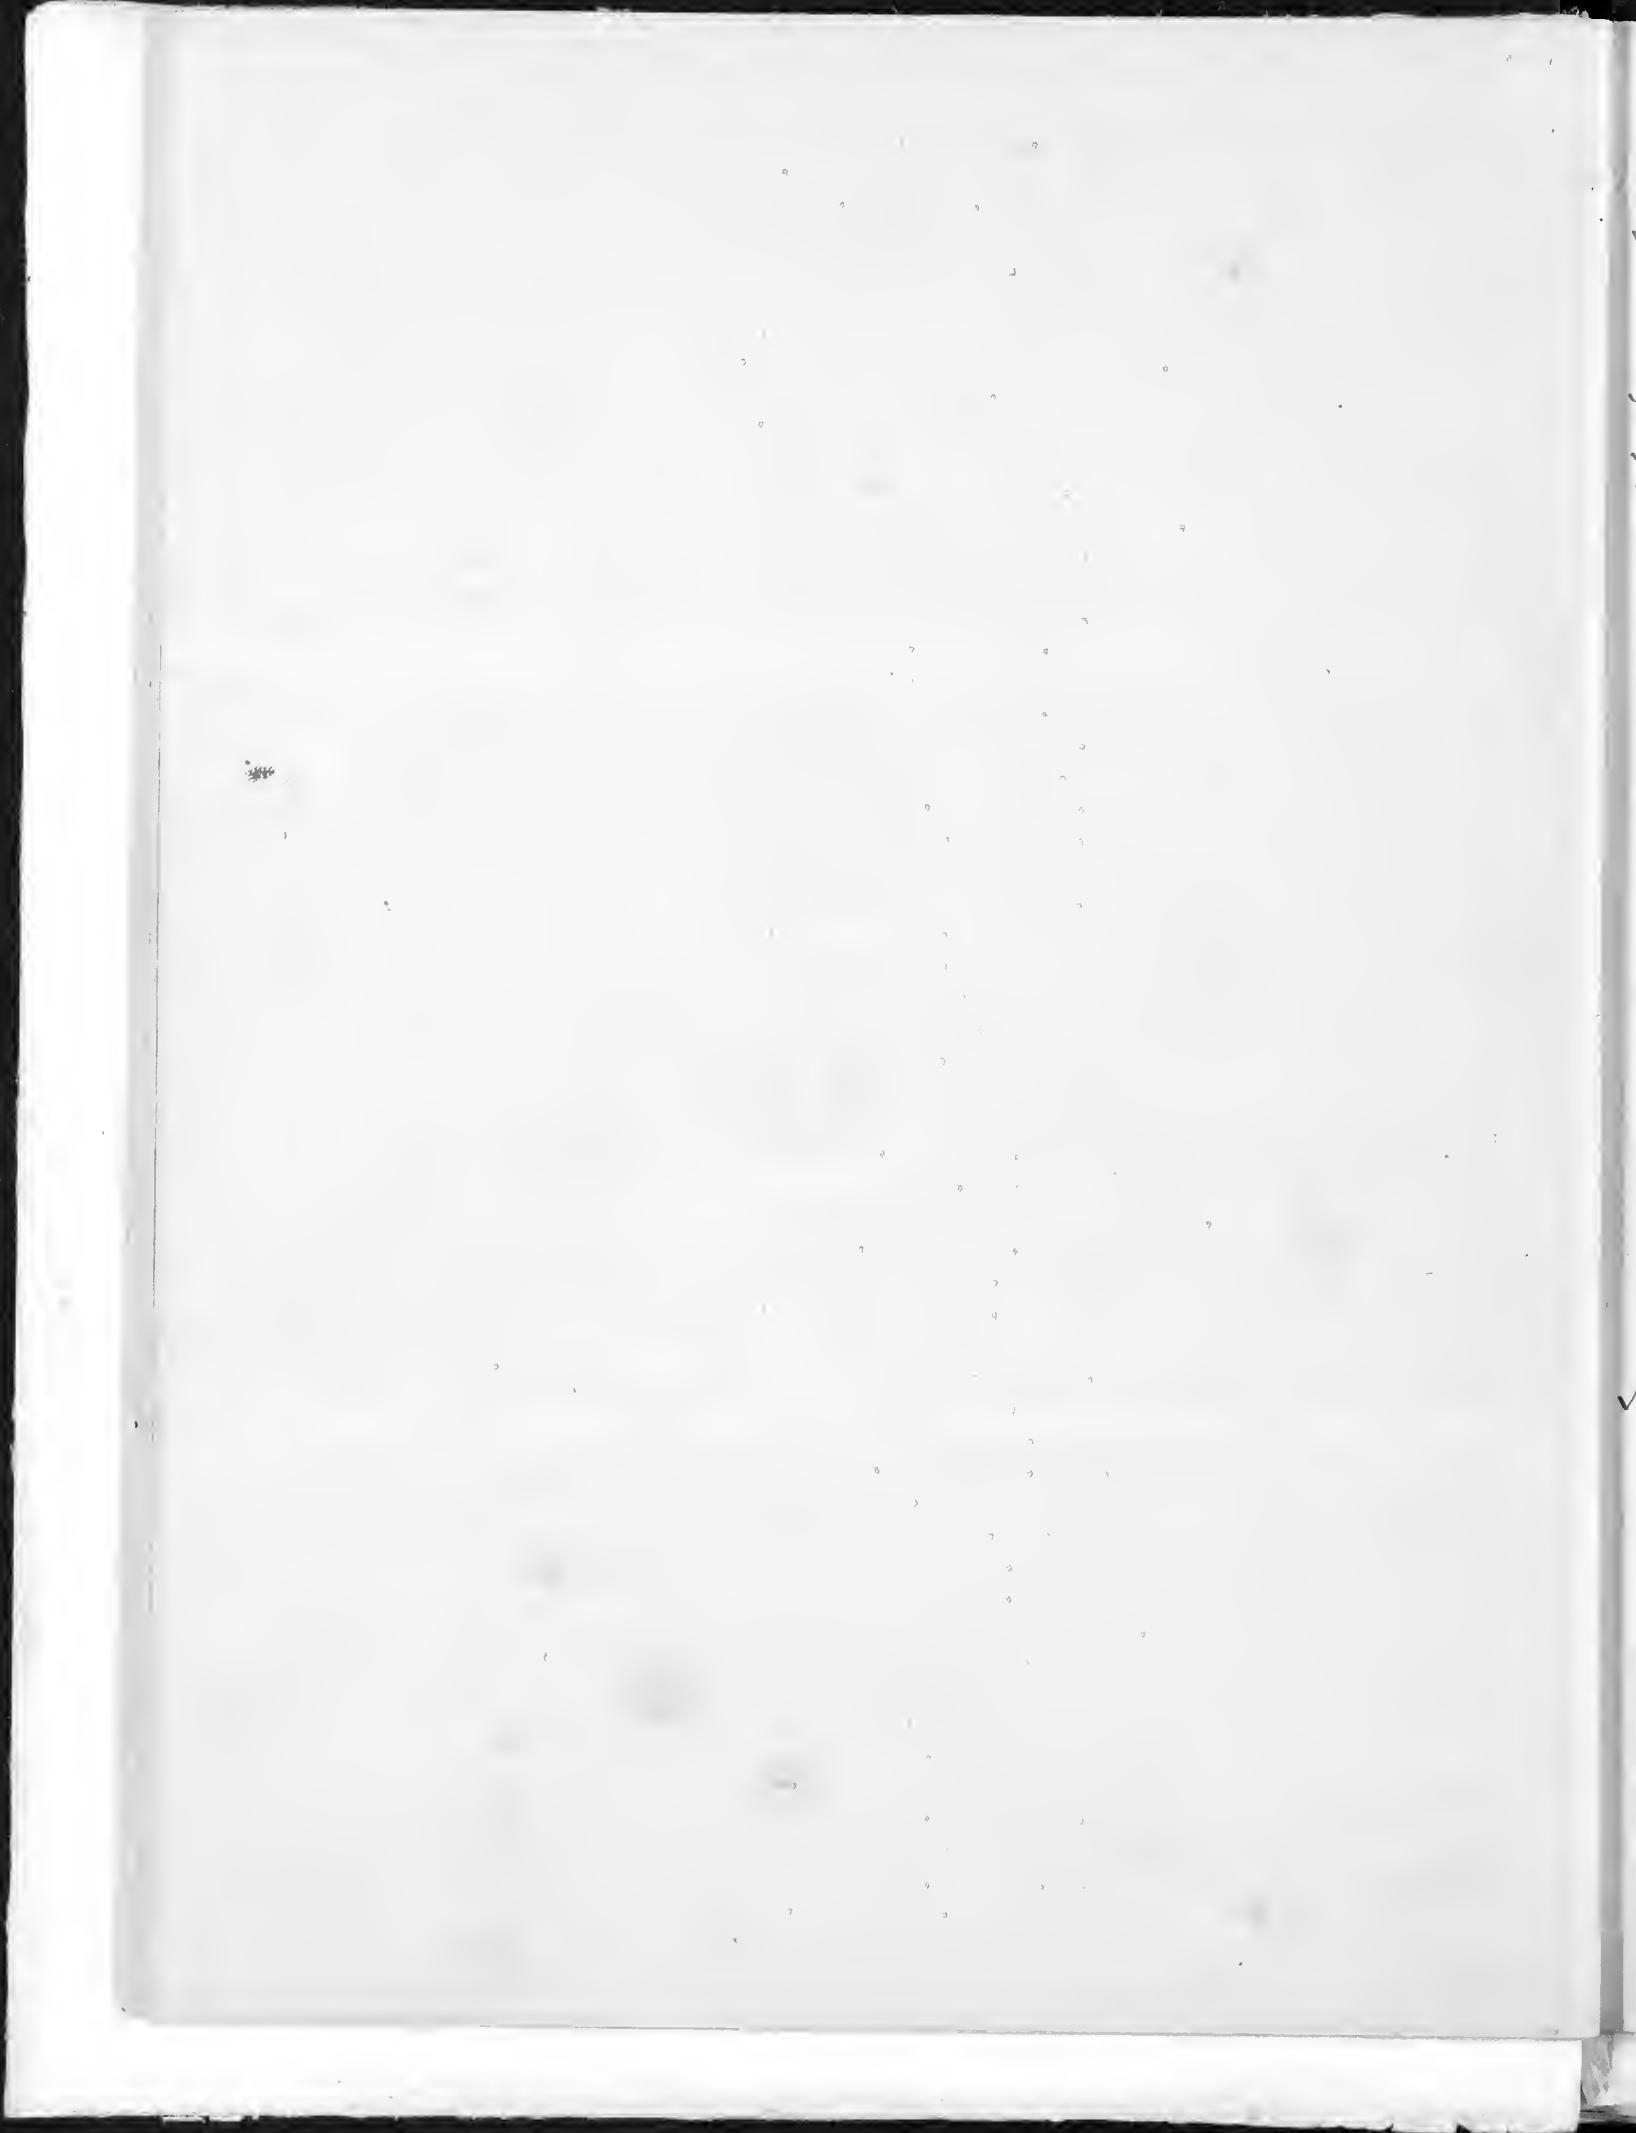

- ✓424 Psidium guajava Linn. (det.)
- ✓423 Morus alba Linn. I suppose, juvenile Moraceae
- ✓422 Ricinus communis Linn. Euph.
- ✓412 Fraxinus (perhaps) Olea
- ✓411 Sapindus mukorossi Gaertn. Sapind.
- ✓410 possibly Sophora sp. Legum.
- ✓407 Bauhinia, possibly tomentosa Linn. Leg.
- ✓407 Cinnamomum camphora Nees & Eberm. Laur.
- ✓448 Eucalyptus sp. juvenile Myrt.
- ✓445 Melia, perhaps azedarach Linn. Meliac.
- ✓444 Sapindus mukorossi Gaertn. Sapind.
- ✓443 Indigofera, perhaps zollingeriana Big. Leg.
- ✓441 Grevillea robusta Cunn. Proteac.
- ✓439 Tagetes diversifolia A. Gray Composit.
- ✓438 Aleurites montana Wilson. Euph.
- ✓437 Sophora, probably Leg.
- ✓436 Humulus japonicus S. & Z. Ulm.
- ✓435 Aleurites moluccana Willd. Euph.
- ✓432 Solanum sp. Solan.
- ✓474 Tamarix chinensis Lour. Tamaric.
- ✓471, 471 ✓Osmanthus fragrans Lour. probably Olea.
- ✓470 Ficus wightiana Benth. Mor.
- ✓466 Ficus elastica Roxb. Mor.
- ✓464 Asclepiad. or Apoc, indet.
- ✓459 Beaumontia ? Apoc.
- ✓457 probably Celtis sp. Ulm.
- ✓452 Albizzia chinensis (Osbn.) Merr. (A. stipulata) Leg.
- ~~XXXXXXXXXXXXXXXXXXXXXXXXXXXX~~
- ✓481 probably Fatsia Aral.
- ✓482 Broussonetia papyrifera Vent. Mor.
- ✓485 Legum. possibly Albizzia
- ✓487 Prunus ? Rosa.
- ✓488 Populus Salic.
- ✓487 Liquidambar ? juvenile
- ✓496 Ficus hirta Vahl, juvenile form
- ✓495 Ficus, probably hispida Linn.
- ✓388 Callicarpa, prob. giraldiana Verb.
- ✓386 Columella (Cissus) juv. Vit.
- ✓385 Schefflera octophylla Harms Aral.
- ✓383 Mallotus philippensis Muell. Euph.
- ✓371 Pithecolobium ? Leg.
- ✓344 Liquidambar ?
- ✓343 Acacia; if native, then probably A. confusa Merr., if cultivated, then probably one of the Australian phyllodinous species.
- ✓342 Ilex ?
- ✓321 Symplocos. Sympyl.

oOo

Identifications as to names follow the International Code. Where names are used differing from those in Forbes ~ Hemsley, etc., the synonym has usually been added.

No. 60 is the same as No. 324 and is probably undescribed. I sent a specimen to Hitchcock and he states that more mature material is desired, the spikelets being very young. As you know the place in which it grows please watch it and collect ample material when the plant is fully mature. I would like to have several specimens if possible so that it it does prove to be new I can place cotypes in several of the larger herbaria of Europe and America.

OK to 400
OK to 499

F.P.Metcalf, additions

- 494 Viburnum luzonicum Rolfe Caprif.
- 456 Elaeocarpus chinensis Hook.f. Elaeoc.
- 480 Salix dunnii Schneider ? fls.needed.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be clearly documented and verified. The second section covers the various methods used to collect and analyze data, highlighting the need for consistency and reliability in the information gathered.

In the third section, the author details the process of identifying trends and patterns within the data. This involves a thorough review of the collected information and the application of statistical techniques to draw meaningful conclusions. The final part of the document provides a summary of the findings and offers recommendations for future research and implementation.

Overall, the document serves as a comprehensive guide for anyone involved in data analysis and record-keeping. It provides a clear framework for how to approach the task and ensures that all necessary steps are followed to achieve accurate and useful results.

Metcalf and Chang,
corrections and additions

- 168 *Aralia chinensis* Linn. not *dasyphylla* Miq.
- 857 *Viola diffusa* Ging var. *glaberrima* W. Becker
- 610 *Viola alata* Buergers.
- 644 *Viola philippica* Cav. subsp. *malesica* W[^]Beckr. same as No.20
not *patrinii*
- 804 *Viola fukiensis* W.Becker n.sp.
- 747 *Viola hupeiana* W Becker
- 565 ✓ Rehder determinesthis as *Desmodium gyroides* DC. but I feel that
it is nearer *heterocarpum* DC. Fruits needed
- 614 *Rubus corchorifolius* Linn.
- 603 *Spiraea*. Rehder thinks this may be a new species. More
ample material desired.
- 800 *Castanopsis concinna* DC. rather than *C. hystrix* DC.

1. The first part of the document
 2. describes the general situation
 3. and the main results of the
 4. investigation. The second part
 5. contains the detailed description
 6. of the experimental method and
 7. the results of the measurements.
 8. The third part discusses the
 9. theoretical aspects of the
 10. problem and compares the
 11. experimental results with the
 12. theoretical predictions. The
 13. fourth part contains the
 14. conclusions and the references.

Microlepia

Selaginella is a very
 critical genus. fruiting
 stage essential; also
 specimens must be
 available so that I can
 send pictures to
 specialists in the
 genus

Don't name mosses, lichens, fungi, helminths etc. If however you will send smaller specimens in three groups with duplicate labels I will try through specialists.

If the specimens had been more ample I probably would have done better in some cases — at any rate I would have been able to divide them & send to specialists in certain groups. It is always a good idea to make the identifications not particularly ample, so that there will be plenty of material for the necessary additions, and when necessary, to divide for specialists.

~~89~~ *Melilotus parviflora* Desf. Leg.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be clearly documented and verified. The second section covers the various methods used to collect and analyze data, highlighting the need for consistency and precision. The third part details the procedures for reporting and reviewing the information, ensuring that all stakeholders are kept informed and that any discrepancies are promptly addressed. Finally, the document concludes with a summary of the key findings and recommendations for future improvements.

1. The first part of the document
 2. describes the general principles
 3. of the proposed system.
 4. It is based on the following
 5. assumptions:
 6. (a) The system is designed
 7. to be flexible and adaptable
 8. to changing requirements.
 9. (b) The system should be
 10. easy to use and maintain.
 11. (c) The system should be
 12. secure and reliable.
 13. (d) The system should be
 14. cost-effective.
 15. The second part of the document
 16. details the architecture of the
 17. system. It consists of the
 18. following components:
 19. (a) A central processing
 20. unit (CPU) which handles
 21. all data processing.
 22. (b) A memory system which
 23. stores data and programs.
 24. (c) A network of terminals
 25. which allow users to interact
 26. with the system.
 27. (d) A set of control programs
 28. which manage the system's
 29. operation.
 30. The third part of the document
 31. discusses the implementation
 32. of the system. It describes
 33. the hardware and software
 34. requirements, and the
 35. steps involved in setting
 36. up the system.
 37. Finally, the fourth part of
 38. the document discusses the
 39. future work that needs to be
 40. done to improve the system.
 41. This includes the development
 42. of new features, the
 43. optimization of the system's
 44. performance, and the
 45. evaluation of the system's
 46. impact on users.

Hutchinson
Fukien Province

- ✓ Aster baccharoides Steetz, 5610, 6771, 5832, 5765, 5722
- ✓ Aster indica L. 5472
- ✓ Artemisia capillaris Thunb. 5153, 5419 I have difficulty in distinguishing A. scoparia W. & K., and some of those referred to the latter may belong here.
- ✓ Chrysanthemum morifolium Ram. 5892, 5890, 5889, 6706
- ✓ Ainsliaea fragrans Champ. 5788
- ✓ Gnaphalium hypoleucum DC? 5144 ✓ not typical
- ✓ Blumea glomerata Bl. ? (4567), 7075, very different looking but probably forms of the same species. One needs in this difficult genus a large series of good specimens showing the whole plant, not merely parts, such as tips of branches etc. I cannot build up a good study series from the fragmentary, poorly selected material you send as 90 percent of the specimens go into the waste basket as not showing sufficient characters to warrant putting into the herbarium. This statement applies to the collections generally, not to specimens in any particular group: were the specimens ample, and showed the parts one needs for critical study they would be preserved.
- ✓ Trema sampsoni (Hance) 6947
- ✓ Smilax opaca Norton 7174, 7038, 7265
- ✓ Smilax china L. var. or forma? 5593, 5525, 5345, 5033, 5101, 6881-6837, 6794, 6671 (no leaves), 7076. What one needs here is not an enormous series of small specimens all in the same stage of development, but few, critically prepared, ample specimens if necessary from marked plants, showing flowers and fruits, thus indicating at least two different periods of collection; again one needs both male and female fls. which may occur on separate plants.
- ✓ 5042 Lycoris radiata Herb. a cultivated plant. no attention whatever is given to indicating whether a plant is cultivated or not. The man who studies a collection is not in a position to know this.
- ✓ 7293 Lauraceae, prob Litsea or Lindera; one can't tell without male fls. and in this case there are only young buds. Whenever possible collectors should wait for open fls. before preparing specimens; this can usually be done when field work is prosecuted in places near ones base.
- ✓ Adenophora verticillata Fisch. 5015
- ✓ Podocarpus macrophylla Thunb. 8613
- ✓ Forsythia sp. 7287
- ✓ Osmanthus marginatus Benth. 7269
- ✓ Ardisia quinquegona Bl. 7051
- ✓ " crenata A. DC. 7260
- ✓ Maesa japonica Mor. var. 6783
- ✓ Maesa sinensis A. DC. 7026, 7029; too young, buds only
- ✓ Dichondra repens Forst. 8672
- ✓ Vaccinium carlesii Dunn (prob.) 5743, 8043, 5977, 5815 (but cf. iteophyllum Hce)
- Thea sasangua Thunb. ? Why couldn't an open fl. have been secured? This is probably not an indigenous species, but cultivated
- ✓ Thea fraterna J. Ktze. 5749, 5783 here belongs probably most of the specimens I referred to T. assimilis, in prev. lists.
- ✓ Thea grijsii (Hance) ? 6767
- ✓ Schefflera octophylla Hance. 7303, 7037
- ✓ Hedera nepalensis var. sinensis (Tobl.) Rehd. 6765, 6804
- ✓ Symplocos caudata Wall ? 5951

Here is a case where the preparation of material is almost a crime because the rhizomes are generally ignored, and only the upper part of a frond sent, showing not even the stipe. I am not a specialist in ferns and fern allies and can name slowly and only by comparison with named specimens; sometimes I am not at all sure as to the species or even to the genus. Christensen is begging for Chinese material and I cannot send him any because you never make a fern specimen large enough to divide. Christensen has on loan most of the Chinese types and the chance for getting authentic determinations was excellent; now a bit late because the material will be sent back to various herbaria shortly. I have never been able to impress by correspondence the necessity of sending ample study sets!

- Phyllostachys bambusoides S. & Z.
- ✓ Ischaemum ciliare Retz. 5130 ✓
- ✓ Pollinia nuda Trin. 5731 ✓

- ✓ Arundinella setosa Trin. 5418 ✓
- ✓ Digitaria sanguinalis (L.) 5026, 5027 ✓
- ✓ Andropogon cinctus Merr. 6807, 5506, 5298, 5248, 5061; all candidates for the waste basket because your collector has pulled off the tops only, leaving the roots and stems to the imagination!
- ✓ Spodiopogon cotulifer Hack 5131, 5177; same as above as to quality; and I would have liked to send a duplicate to Hitchcock for his opinion on my determination!
- ✓ Panicum villosum Lam. 8441 ✓
- ✓ Andropogon ischaemum L. 5075?, 5637, 5364, 5202; all candidates for the waste basket; see above.
- ✓ Bragrostis elegantula Steud (prob.) 6903 ✓
- ✓ " pilosissima Link. 5104 ✓
- ✓ Calamagrostis arundinacea Roth 5723, 5866, 6720, 6902, 5415, 5068 ✓
some might be C. sylvatica, but nothing available to send for critical comparison.
- ✓ Millettia reticulata Benth. 5089 ✓
- ✓ Lespedeza cyclobotrya Dunn & Tutch. 5594, 5568, 5278 ✓
- ✓ " virgata DC. 5062 ✓
- ✓ " formosa Koehne 5257 ? ✓
- ✓ " macrocarpa Bunge 5055, 5385, 5871, 5162, 5609, 5739 ✓
- ✓ Crotalaria albida Heyne 5046 ✓
- ✓ Desmodium laburnifolium DC. 5118, 5272, 5204, 5354, 5486 ✓
- ✓ Pisum sativum L. 7118 ✓
- ✓ Glchidion obovatum S. & Z. 5274, 5148, 5219, 5115 ✓
- ✓ Plectranthus (not Salvia) 5704 ✓
- ✓ Torenia glabra Osb. 8339 ✓
- ✓ Linnophila aromatica Merr. 5077 ✓
- ✓ Cyperus malaccensis Lam. 5237 ✓
- ✓ Aleocharis tetraquetra Nees. 5076 ✓
- Cyperus teinogyna Boott.

- ✓ *Ilex purpurea* Hassk. 7232 ✓
- ✓ *Ilex triflora* var. *viridis* Loesen. 6763 ✓
- ✓ *Talinum crassifolium* Willd. 5732 ✓
- ✓ *Euonymus chinensis* Lindl. 5744, 5796 ✓
- ✓ *Casearia subrhombica* Hance ? 5692 ✓ Not satisfied, but the description is short and imperfect. One needs material to send for comparison with the type in the British Museum. Blocked until this can be done
- ✓ *Elaeagnus glabra* Thunb. 7199, 6806, 5836, 5714 ✓
- ✓ *Elaeagnus pungens* Thunb. 5526, 5684, 6932 --- all most unsatisfactory specimens, scraggy, fls too young etc.
- *Petunia violacea* Lindl. "grassy hillside" as is indicated for very numerous cultivated plants. It would be rather surprising to say the least were all plants so indicated spontaneous.
- ✓ *Eurya japonica* Thb. 8547 ✓
- ✓ *Viola philippica* Cav. 6815, 7124, 5991; one can't be sure in this most critical genus and I would prefer Becker's determination, but in no case in the entire collection is there enough material under a single number so that a division can be made!
- Viola sp. 8670, not matched, fls needed
- ✓ *Wilstroemia nutans* Champ. 5671 ✓
- ✓ *Fortunella hindsii* Swingle (5810) 7271, 6994 One really needs local names of these cult and semicult species. I have an idea that Swingle has split too far in recognizing "species" in the kumquat genus, but one again needs complete specimens, complete notes, etc.
- ✓ *Kadsura japonica* Thunb ? 6795 ✓
- ✓ *Euphorbia splendens* Boj. 6757 "Wooded hillside" impossible!!!! this is a garden plant, native of Mauritius, and surely not naturalized in China as the note would indicate.
- *Humulus japonicus* S. & Z
- *Juniperus squamata* Lamb. 8063 *not found*
- ✓ *Quercus glabra* Thunb. 5016 ✓
- ✓ *Patrinia scabosiaefolia* Fisch. 7127, 5918, 5941, 5069 One can't be sure of the specific detx in any case, as only the tops of the plants are shown, the lower character leaves absent entirely
- ✓ *Sycopsis dunnii* Hensl. 8691, 8704, both typical! your 3328, sterile, does not belong here, although probably a *Sycopsis*
- ✓ *Ammannia auriculata* Willd. 5263 ✓
- ✓ *Rosa bracteata* Wendl. 5249 ✓
- ✓ *Stranvaesia benthamiana* Merr. 5813 ✓
- ✓ *Rubus thunbergii* S. & Z. 7117, 7144, 7267 ✓
- ✓ *Rubus* cf. *huii* Diels 5755; you ask about *formosana* and *huii*; I cannot answer the query short of an examination of both types in Europe. Type of *formosana* was from Formosa, of *huii*, from China, Chekiang I believe. Better hold *huii* for the Chinese form at least for the present.
- ✓ *Spiraea thunbergii* var. *fukienensis* Rehd. 7251, 7193, (6789)
- ✓ *Clematis uncinata* Champ. 5014 ✓
- ✓ *Clematis meyeniana* Walp ? 8677 ✓
- *Polygonum* spp. All my material loaned to the Gray Herbarium; with nothing for comparison I cannot go beyond the genus except in those cases where I recognize a species at sight; your material will be sent away for study as soon as it is mounted.
- Selaginella* spp. I can do nothing with the material because of the exceedingly critical nature of the group. Hieronymus has split so fine that one cannot make determinations with certainty from the descriptions alone, but comparisons must be made with the types in Europe. In no case have you sent enough material to divide.

Earlier sending

- 1958 by definition is *Cocculus trilobus* DC. ✓ *not listed* ✓
- ✓ 1473 ~~Diospyros~~ *Diospyros*; still awaits fls. *not listed* ✓
- ✓ 1449 probably *Thea fraterna* (Hance) *not listed* ✓
- ✓ 1063 *Athyrium*; basal parts essential, *undoubtedly A. nigripes* Miellec
- ✓ 1962 *Dryopteris*, probably *gracilescens*. *not listed* ✓
- ✓ 1055 *Adinandra millettii* Benth. *not listed* ✓
- 1997 *Tylophora*; I still think it undescribed but unfortunately Schlecter's death blocked me in getting his opinion and there is no other specialist in this difficult family.

I cannot account for the block of 50 missing numbers you asked about some time ago. Very likely the specimens were received but if so they have gone into the herbarium or into the discard by accident, i.e., before the list of names was prepared, and I have no way of getting at them. If you have other duplicates of the numbers you cannot name to your own satisfaction, please send them along.

Berkeley, Jan. 8, 1928

Dear Mr. "etcalf":

On my return from Los Angeles this morning I found the package of "extras" you sent for further determination. Unfortunately little can be done with the material because in most cases the specimens, both original and second sending, are too fragmentary, young, or sterile. In such cases neither or specialists can do much; and it is bad policy to send sterile or incomplete material to the average specialist who rightly feels that if he volunteer his time and knowledge to make determinations he should really have something worth putting into his herbarium to show for it.

- 2758 this seems to be the same as the form I am referring to *Glochidion obovatum* Huell.; I may be wrong in this (Incidentally have your assistants begin the generic name at the extreme right of the label; these you have sent are all written in the middle leaving no space for the specific name later)
- ✓ 2716 too young, even Hitchcock wouldn't attempt anything beyond the genus, as I sent him a bit of the original sending no stock ✓
 - ✓ 2683 ~~is~~ named correctly as far as I know; the flowers should have been given special attention in drying; fruits ~~are~~
 - ✓ 2588 ~~the same as~~ needed anyway.
 - ✓ 2563 *Arundinaria japonica* S. & Z. according to Hitchcock; but to be compared with *A. brevipaniculata* Hand.-Maz.
 - ✓ 2555 *Dioscorea collettii* Prain and Burkill, det Burkill.
 - ✓ 2531 *Teucrium japonicum* Thb., at least as currently interpreted for the Chinese form; *T. viscidum* Bl. the same?
 - ✓ 2515 not *Glycine*; probably a form of *Galactia tenuiflora* W. & A.
 - ✓ 2508, perhaps form of *Chenopodium album* L. Also 2481 ✓
 - ✓ 2505 not *Viburnum*, but *Callicarpa* sp., perhaps referable to *C. japonica*
 - 2497 *Pimbristylis*, too young in Cyperaceae generally one needs mature fruits, not very young buds.
 - 2483 *Allium* sp. One of the most critical of genera; there is no specialist and generally I cannot place them beyond the genus.
 - ✓ 2464 sterile; might be either *Equisetum debile* or *E. ramosissimum* Desf. Leave it as the former
 - 2463 *Silene* with reasonable certainty, but only very young buds
 - ✓ 2454 fls. needed. is *Rhododendron* but beyond this I cannot go
 - ✓ 2448 see 2758 ✓
 - ✓ 2445 probably a mixture. The second sending is *Ligustrum* sp.!!
 - ✓ 2441 a mixture originally? The second sending is *Photinia* sp.!
 - 2429 *Selaginella*, sterile, indet. One needs fully mature and most complete material in this difficult genus. I can only hope for assistance from Berlin where I have enough fertile material to divide and send for comparison with types.
 - ✓ 2427 same as 2716
 - ✓ 2414 is *Crataegus*! sterile One needs fls and fruits. Group of *C. cuneatus*
 - ✓ 2398 more apt to be *Phaius*; one needs flowers in this critical family as there are no characters in the fruits.

34

- 2386 Sedum no leaves no flowers.
- ✓ 2377 is probably *Centranthera humifusa* Wall.
- 2369, will try to get a further det? from Johnston.
- 2352 you suggest Dr. Rose; from such a scrap nobody could with certainty go beyond the genus
- ✓ 2347 *Lipocarpha microcephala* Kth.
- ✓ 2322 *Saccharum spontaneum* Linn.
- ✓ 2261 one of the numerous forms that go under *Lurya japonica* Thb.
- ✓ 2257 *Athyrium* (*Diplazium*); fill tyu Christensen.
- ✓ 2239a *Fimbristylis*, too young
- 2231 is probably correctly named, but is too young
- ✓ 2226b an extreme form of *Panicum indicum* Linn.
- ✓ 2226a *Digitaria chinensis* (Nees)
- 2213 is correct; sterile
- ✓ 2212 is correct as to genus; will try Christensen ^{probably} *A. maximum* ~~Wilde~~
- 2208 is correctly named
- 2200 is correct as to the genus, beyond which I cannot go at present
- 2193 is correct but one needs fruits whenever possible.
- 2190 is correct
- ✓ 2164 *Scleria harlandii* or *hebecarpa*; I am not sure which
- 2011 I think is correct.
- 2009 is probably correct
- 2007 *Selaginella* sp. sterile, indet.

The list of determinations of your material from 11000 above is now being copied and as soon as it is done I will forward it to you.

In future sendings I cannot too strongly emphasize the necessity of supplying ample material so that as I make the determinations I can divide the specimens when necessary to secure the necessary assistance from specialists. Time is my chief lack and probably always will be as long as I hold an administrative position. Fewer numbers, better selection, and more ample specimens, eliminating the poor stuff, will get you much further in the long run. Collections are simply pouring in on me now and I have great difficulty in keeping ahead or even keeping fairly well caught up. As I have stated in former letters I simply cannot handle all groups as to specific determination but must depend on others wherever I can locate anyone who will study and report on material in special groups.

Very truly yours

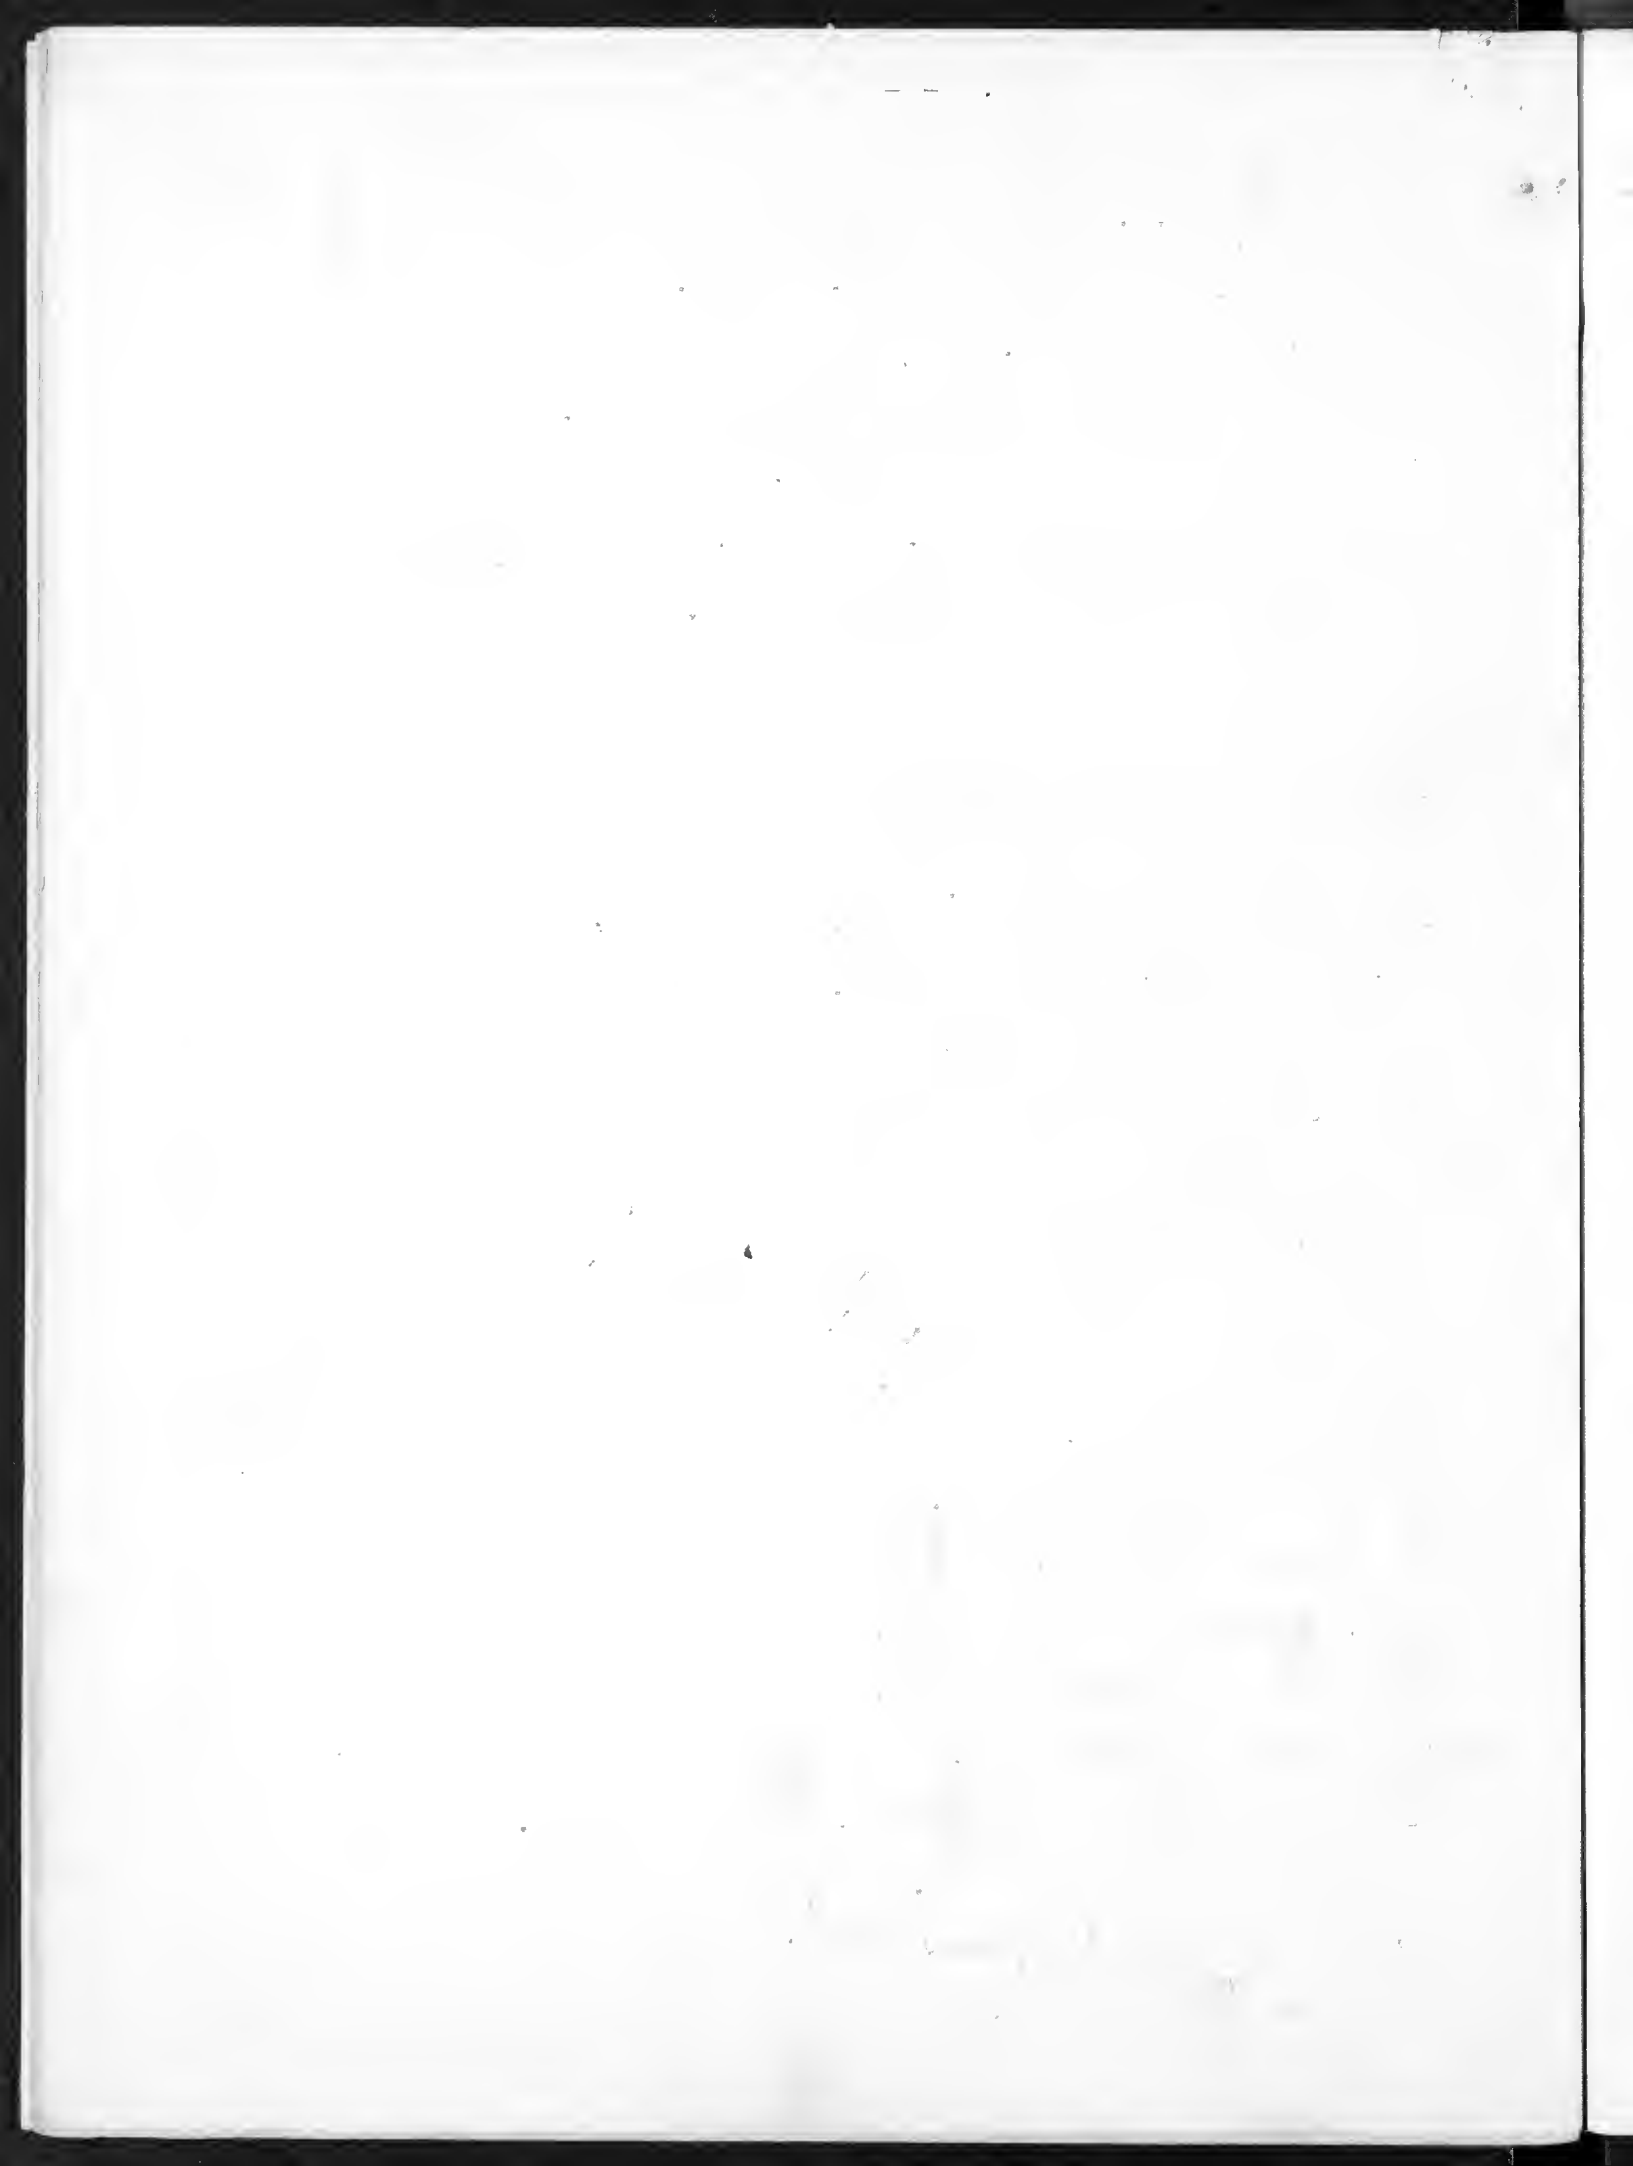

E. D. Merrill

Polygonum spp.; all my material is on loan at the Gray Herbarium
Your specimens will be sent as soon as they are mounted.

- 11176, 11427, 11729 same as 1110 not *Rhamnus hupehensis* but *Rhamnus utilis* Decne.
- 12232, 12266 *Rhamnus leptophyllus* Schneid.
- 11992 *Calystegia*? or *Ipomoea*?
- 12433, 12499 *Ipomoea calycina* Clarke
- 12580, 12403, 12475, 12531 *Merremia hederacea* Hall.f.
- 12563, 12520 *Natura suaveolens* H. & B. (if fls. are white)
- 11557 *Hydrocharis morsus-ranae* L.
- 11549 *Limnanthemum indicum* Thw.
- 11677 *Celastrus articulatus* Thunb.?
- 12227 *Lasianthus chinensis* Benth (prob.)
- 12271 *Hedyotis tenuipes* Hensl
- 12386, 12638 *Kochia scoparia* Schrad
- 12116 *Atriplex tatarica* Linn? fruits needed
- 11147, 11997 perhaps a form of *Amaranthus gangeticus* L.
- 12367, 12493 *Chenopodium album* L? var.; lower character leaves not collected, only tops of the plants
- 12260, 12291, 12118 *Thea fraterna* Hance as far as I can tell now
- 12194 *Ludwigia parviflora* Roxb
- 11188 *Actinostemma lobatum* Maxim (prob.) no fls.
- 12838, 12817 both sterile, prob *Casearia subrhombica* Hance
- 12168 *Acer lanceolatum* Hohl
- 11353 *Ampelopsis brevipedunculata* Koehne (*A. heterophylla*)
- 12769 *Columella japonica* Merr.
- 11722 *Elaeocarpus decipiens* Hemsf.
- 11339 (or 11380?) 12686, 12114 *Silene fortunei* Vis.
- 12124 *Silene aprica* Tcz.
- 12105, 12658 *Dianthus chinensis* L.
- 12695, 11320 *Zanthoxylum bungei* Pl.
- 11849, 11324 *Peucedanum japonicum* Thb.
- 11062 *Apium leptophyllum* Huell.
- 12739, 12738 *Gaillardia aristata* Pursh
- 11522 *Blumea hieracifolia* DC?
- 12390 *Blumea mollis* Merr.
- 11526 *Bidens tripartita* L.
- 12190 *Aster baccharioides* Steetz?
- 11818 *Aster hispidus* Thunb
- 11910 *Aster fordii* Hensl (or *striatus* Champ?)
- 12196 *Artemisia apiacea* Hance? too young
- 11816, 12664, 11369, 12527, 12581 *Wedelia chinensis* (Osbeck) Merr.
- 11834 *Wedelia prostrata* Hemsf.?
- 12637 *Lactuca denticulata* Maxim
- 11982 *Coreopsis lanceolata* L.
- 12154, 11086 *Chrysanthemum frutescens* L. (prob.) Your collector is very careless when he states "wooded hillside" for this cult and introduced species!
- 12032 *Antirrhinum majus* L.
- 11033, 12324 *Clerodendron fragrans* Vent; also your nos. 4527, 2021, 3945, 3237, all reported as *C. foetidum* Bunge I think
- 11793 *Callicarpa formosana* Rolfe
- 11414, 12407, 12195, 12050 (this also *Ludwigia parviflora* Roxb mixed) *Ilysanthes antipoda* (L.) Merr.
